

## Portable Video Surveillance From Anywhere to Anywhere™

**Biometrically Secure  
Remote Access to  
Internet Cameras  
Globally**

### TeleportVision Modules

PC Display Client

Pocket PC Client

PC Archive Player

### When Security Is Not an Option

TelePortVision® has addressed the challenges faced by Federal agencies including the US Department of Homeland Security and law enforcement, public safety, and enterprise-wide security and emergency management agencies in charge of protecting access to physical and logical assets.

Centralized command center surveillance operations centers are quickly being replaced by Enterprise-level internet based video surveillance applications allowing protective security officers to remotely connect and control critical video data from anywhere, anytime, and anyplace. Our solution using portable applications technology provide connectivity to any remote camera running Microsoft dows™, Linux™, or Mac/OS™ desktop or server based operating system.

### Applications Include:

**Government  
Medical/Health Care  
Law Enforcement  
Public Safety  
Financial  
Education  
Commercial  
Industrial  
Residential  
Applications**

Each transaction performed by the user is validated by having the authorized user swipe his/her finger on a secure USB token, which is authenticated using digital certificates and encryption confirming their user's identity and permissions to cameras. Time stamps and audits capture all transactions performed by the user. If the key is lost or stolen, the issuing officer and/or certification authority can revoke the authentication properties of the token immediately.
